1. Visibility of System Status

   Create a New Worked-Out Example Page

   There is no autosave status or indication that the user's work is being saved periodically.

   Recommendations

   Include an autosave feature with a visible timestamp of the last save.

2. Match Between System and the Real World

   Homepage (Student View)

   The terms "Be an Expert," "Be a Reviewer," and "Be an Explorer" might not be immediately clear to new users regarding their functions.

3. User Control and Freedom

   Create a new worked-out example

   There is no clear "exit" or "cancel" option if a user changes their mind about creating a new example.

4. Consistency and Standards

   Sign Up

   The action buttons ("Sign up," "Learn more," "Login," "Forgot password?") are not visually consistent.

   Be an Expert Page

   The use of "WE ID" is not a standard term, and its meaning may not be clear to users.

5. Error Prevention

   Not Shown in the prototype

6. Recognition Rather Than Recall

   Sign Up / Log In Page

   There's no in-context help or password requirements visible before or as the user types.

   Be an Expert Page

   The status icons and terms like "WE ID" might not be immediately clear, requiring users to remember what they signify.

7. Flexibility and Efficiency of Use

   Not Shown in the prototype

8. Aesthetic and Minimalist Design

   Sign Up / Log In Page

   The "Learn more" link under "Sign Up" may not be necessary if the sign-up process is straightforward.

Be a Reviewer Page

The tables may contain more columns than necessary, which could overwhelm the user.

9. Help Users Recognize, Diagnose, and Recover from Errors

Not Shown in the prototype

10. Help and Documentation

Not Shown in the prototype
